

Mr Booth's **punch card kit**

Instructions:

Print as many of these cards as you need.

You need to punch or cut holes in the circles using a craft knife or hole punch.

Then you cut away the strips for the properties that do **not** apply to the card's object and join the pre-punched hole up with the edge of the card. This means that the only text labels left should describe your object.

You can then sort the cards by putting a knitting needle (or needles) through the relevant holes. For example find only the black dogs by putting pencils through the black and dog holes and lift them up.
